What are Nautical Charts?

Nautical charts are a fundamental tool of marine navigation. They show water depths, obstructions, buoys, other aids to navigation, and much more. The information is shown in a way that promotes safe and efficient navigation. Chart carriage is mandatory on the commercial ships that carry America's commerce. They are also used on every Navy and Coast Guard ship, fishing and passenger vessels, and are widely carried by recreational boaters.

What is a BookletChart[™]?

This BookletChart is made to help recreational boaters locate themselves on the water. It has been reduced in scale for convenience, but otherwise contains all the information of the full-scale nautical chart. The bar scales have also been reduced, and are accurate when used to measure distances in this BookletChart. See the Note at the bottom of page 5 for the reduction in scale applied to this chart.

Whenever possible, use the official, full scale NOAA nautical chart for navigation. Nautical chart sales agents are listed on the Internet at http://www.NauticalCharts.NOAA.gov.

This BookletChart does NOT fulfill chart carriage requirements for regulated commercial vessels under Titles 33 and 44 of the Code of Federal Regulations.

Notice to Mariners Correction Status

This BookletChart has been updated for chart corrections published in the U.S. Coast Guard Local Notice to Mariners, the National Geospatial Intelligence Agency Weekly Notice to Mariners, and, where applicable, the Canadian Coast Guard Notice to Mariners. Additional chart corrections have been made by NOAA in advance of their publication in a Notice to Mariners. The last Notices to Mariners applied to this chart are listed in the Note at the bottom of page 7. Coast Pilot excerpts are not being corrected.

For latest Coast Pilot excerpt visit the Office of Coast Survey website at http://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 https://www.nauticalcharts.noaa.gov/nsd/searchbychart.php?chart=164 <a href="https://www.nauticalcharts.noaa.gov/nsd/searchbycharts.n

(Selected Excerpts from Coast Pilot)
Agattu Island, about 22 miles SE of Attu
Island, is the second largest and the
southerly island of the Near Islands. This
island is roughly triangular in shape with the
N shore or base of the triangle trending in a
WSW direction. The N shore is about 17
miles in length, the S shore 14 miles and the
E shore 9 miles in length.

The island is volcanic in origin, and similar in terrain, shoreline, and vegetation to the other islands of the aleutians. Mountain

peaks 1,992 feet high are adjacent to the E half of the N shore and 2,080 feet to the SW. The shoreline is rocky and precipitous and fringed with close-inshore pinnacles. Boulder or pebble beaches are at the heads of

most of the bights; frequently the boulders are outside the low water line which renders landing in small boats, except in a smooth sea, difficult. Water may be boated from streams in most of the bights. Most of the points rise 50 to 200 feet from the water to headlands and then slope more gradually to the interior.

The peaks are generally obscured by a low ceiling. For this reason the points are the most suitable features for navigational purposes. **Krugloi Point**, the NE end of the island; **Cape Sabak**, the SE end of the island; and **Gillon Point**, the W end of the island, are hills and plateaus sloping to the water's edge or ending in sheer headlands. Gillon Point ends in a low flat-topped headland which appears separated from the island. **Kohl Island**, 156 feet high, is about 2.5 miles W of Cape Sabak and is prominent. Gillon Point should be given a berth of at least 1 mile and Krugloi Point 3 miles.

Cape Sabak and Gillon Point are Steller sea lion rookery sites. There is a mile vessel exclusionary zone around these rookeries. (See **50 CFR 223.202**, chapter 2, for limits and regulations.)

Armeria Point, 5 miles NE of Gillon Point, is a sheer double pointed headland 100 feet high, fringed with high pinnacles, and rising to greater elevations a short distance inland. **Patricia Point**, 6 miles W of Krugloi Point, is low and slopes gradually back to the hills inland.

Nile Point on the S side, 2.3 miles E of Gillon Point, is a bold headland. A dangerous breaker is about 0.5 mile off this point. This is one of the few off-lying dangers.

The hills and plateaus constituting most of the island give the appearance of flat tableland from a distance but in most of the areas are interspersed with numerous valleys.

It is recommended that medium craft keep outside the 20-fathom curve around the island except when seeking shelter, and large craft outside the 40-fathom curve.

All anchorages about the island are limited as to shelter, but the island is not large and both medium and large craft can proceed to such anchorages as the prevailing weather requires.

The currents are weak and heavy tide rips will not be encountered about this island except in rare cases.

Patricia Bight is the best anchorage off the N shore. Extensive kelp beds make well out from the E side of this bight and a long reef makes out from about the deepest part in a N direction, ending in a rock which uncovers. This reef is surrounded by extensive kelp beds. Small craft may proceed to an inner anchorage E of this reef and into the deepest part of the bay. A fox farmer's cabin is at the head of this bight. No evidence of kelp or dangers has been found in other parts of the bight except very close inshore. Large or medium craft should anchor in 15 to 20 fathoms, sand bottom, 0.5 to 0.8 mile off the W shore and about E of the end of Patricia Point.

Binnacle Bay is a bight 1 mile SW of the end of Patricia Point. Kelp beds are off the N part of the E shore. A kelp bed also makes out from the point at the W side of the deepest part of the bay. The remainder of the area seems to be clear of kelp and anchorage can be had as needed in 17 to 21 fathoms, hard bottom.

In **Armeria Bay** no dangers were found outside the kelp area. A 10-fathom bank is 1.5 miles E of Armeria Point. Anchorage may be had 0.5 mile SE of the bank in 24 to 25 fathoms, hard sand and rocky bottom.

VHF Marine Radio channels for use on the waterways:

Channel 6 – Inter-ship safety communications.

Channel 9 – Communications between boats and ship-to-coast.

Channel 13 – Navigation purposes at bridges, locks, and harbors.

Channel 16 – Emergency, distress and safety calls to Coast Guard and others, and to initiate calls to other

vessels. Contact the other vessel, agree to another channel, and then switch.

Channel 22A – Calls between the Coast Guard and the public. Severe weather warnings, hazards to navigation and safety warnings are broadcast here. Channels 68, 69, 71, 72 and 78A – Recreational boat channels.

Getting and Giving Help — Signal other boaters using visual distress signals (flares, orange flag, lights, arm signals); whistles; horns; and on your VHF radio. You are required by law to help boaters in trouble. Respond to distress signals, but do not endanger yourself.

Distress Call Procedures

- Make sure radio is on.
- Select Channel 16.
- Press/Hold the transmit button.
- Clearly say: "MAYDAY, MAYDAY, MAYDAY."
- Also give: Vessel Name and/or Description; Position and/or Location; Nature of

Emergency; Number of People on Board.

- · Release transmit button.
- Wait for 10 seconds If no response Repeat MAYDAY call.

HAVE ALL PERSONS PUT ON LIFE JACKETS!

NOAA Weather Radio All Hazards (NWR) is a nationwide network of radio stations broadcasting continuous weather information directly from the nearest National Weather Service office. NWR broadcasts official Weather Service warnings, watches, forecasts and other hazard information 24 hours a day, 7 days a week.
